SUMMARY

Full stack developer with over a year of experience specializing in PHP, JavaScript, Laravel, and React. Recently built and scaled a Laravel REST API that currently handles traffic for tens of thousands of mobile users. I currently lead a team of 5 web developers and manage onboarding for new trainees, with a strict focus on writing clean and maintainable code.

EXPERIENCE

Full Stack Developer · HeroApps Software Development Services *May 2025 – Present*

- **Solo-engineered** a full Legal Service App ecosystem from scratch for a **US law firm client**. Designed and built a RESTful backend API handling **5+ core service modules**, architected the React admin dashboard, and led the production to **AWS (EC2 + S3)** using Docker.
- **Architected and containerized** a Laundry Management System using **Laravel 12, React, Inertia.js, and TypeScript**, reducing environment inconsistency issues to zero and enabling a reproducible deployment pipeline across dev and production.

Full Stack Developer Intern · HeroApps Software Development Services *Feb 2025 – Apr 2025*

- **Digitized a local clinic's** entire manual patient management workflow — rebuilt a legacy PHP system into a production-ready solution handling patient records, history tracking, and appointment management for **~10000+ patient records**.
- **Patched critical security vulnerabilities** in existing PHP/MySQL codebases including SQL injection risks and session handling flaws, hardening data integrity for sensitive medical records.

PROJECTS

Dance and Arts UK *2025*

- **Engineered a full-stack school management** using TanStack Start for a **UK dance & arts school** built a centralized scheduling system coordinating **25+ school clubs, multiple venues, and 50+ teaching staff**.
- Built a real-time **broadcast communications system** enabling admins to push scheduling updates instantly to all teaching staff, replacing manual notification workflows.
- Architected a **unified data layer with Supabase**, implementing relational logic for teacher availability, student rosters, and multi-venue club scheduling and cutting scheduling conflicts by design.

NFT Marketplace — Frontend Redesign *2025*

- **Overhauled the entire frontend** of a decentralized NFT marketplace using **Next.js 12 and Tailwind CSS**, modernizing the UI and improving visual consistency across all marketplace views.
- Integrated **Ethers.js and Web3Modal** for seamless wallet connection, enabling users to connect, browse, and transact entirely on-chain with no backend dependency.
- Implemented **Framer Motion** animations for fluid state transitions and real-time marketplace updates, reducing perceived load latency through optimistic UI patterns.

SKILLS

Backend: PHP (Laravel 11–12), MySQL, RESTful APIs, System Architecture

Frontend: React, TypeScript, Inertia.js, Next.js, Tailwind CSS, Bootstrap 5, SCSS, Framer Motion

DevOps & Cloud: Docker, Docker Compose, AWS (EC2 / S3 / Amplify), Git, Vite, Bun

AI & Automation: OpenAI API, LLM integrations, AI-assisted workflows (actively upskilling)

Concepts: Containerization, Legacy Refactoring, API Design, ATS Optimization, Agile, Scrum

EDUCATION

BS in Information Technology · Camarines Norte State College *Aug 2021 – Jul 2025*

Relevant Coursework: Data Structures, Web Development, Database Management, Software Engineering
